Marvs04 • Costa Rica · Open to Remote · EN/ES Bilingual

Summary

Bilingual Junior Developer specialising in React/TypeScript frontends and institutional web platforms. Experienced delivering production-grade internal systems — multi-role portals, data pipelines, headless CMS sites — as both a solo contributor and in collaborative teams. Applies CI/CD, automated testing and constraint-driven architecture to ship reliable software under real budget and deadline pressure.

Technical Skills

Frontend: React 19, TypeScript 5.8 (strict), JavaScript ES6+, Tailwind CSS 4, Astro 5, Material UI, Motion (Framer Motion)
Backend & APIs: Node.js, Express, Supabase (Auth, Database, Realtime, Edge Functions), Strapi 5, REST APIs
Data: Python, Pandas, Streamlit, PostgreSQL, Regex-based data normalisation
Tooling & DevOps: Vite, Vitest, GitHub Actions (CI/CD), Husky, ESLint, Docker, Azure, Figma, Git

Experience

SENDA – UNADECA Scholarship Platform — **Costa Rica**
Frontend Developer (Freelance) — *2026–Present*

- Building a 5-role work-scholarship portal (Student, Dept. Head, Admin, Accounting, Super Admin) with **React 19, TypeScript strict mode and Vite 6**; per-role code splitting via **React.lazy** so each user type downloads only its own bundle.
- Isolated all billing-cycle math, trimester detection and payroll logic in a pure `business.ts` (no React, no DOM), enabling **32 deterministic Vitest unit tests** and a one-env-var swap from mock data to live **Supabase**.
- Enforced **ESLint 0-warning policy** with **Husky** pre-commit hooks; **GitHub Actions CI** pipeline (lint → typecheck → test → build) gates every push and PR.

Asociación Norte de Costa Rica (ACNR) — **Costa Rica**
Web Developer (Freelance) — *2026–Present*

- Built institutional site with **Astro 5, Tailwind CSS 4 and Strapi 5**; typed the Strapi v5 flat-response schema with generics (`StrapiListResponse<T>`) so CMS shape changes never reach page components.
- Implemented **hybrid SSR/static routing**: church-directory filter runs server-side, rest of site is prerendered; graceful fallback to mock data keeps the app renderable in CI and local dev without a running CMS instance.

UNADECA — **Costa Rica**
Full-Stack Developer — *2023–2025*

- Designed and shipped **STAMP**, a multi-user boarding-school platform covering QR-based church attendance (kiosk mode), exit-permit management and student self-service – two frontends (MUI for staff, custom for students) sharing one **Express + Supabase** backend.
- Built **Student Path**: normalised 10+ years of institutional CSV records (2016–present) with **Python, Pandas and Regex**; delivered graduation-eligibility engine via **Streamlit** dashboard on **PostgreSQL / Azure / Docker**.

Poás Stereo Radio — **Costa Rica**
Web Developer (Freelance) — *2025*

- Designed and deployed radio station website with **Astro and Tailwind CSS**; zero-JS static output with content-focused architecture for near-perfect Lighthouse scores.

UNADECA — **Costa Rica**
Learning Systems Administrator — *2022–2025*

- Managed Moodle LMS supporting **500+ active students**; handled integrations, user provisioning and platform maintenance alongside development work.

Startek — **Honduras**
Bilingual Technical Support Specialist — *2020–2022*

- Delivered English-Spanish customer and technical support achieving **90%+ first-call resolution rate**.

Education

Universidad Adventista de Centro América (UNADECA) — **Costa Rica**
B.Sc. Computer Science — *2022–2026*

Instituto Técnico Espíritu del Siglo — **Honduras**
Technical Degree, Computer Science — *2012–2015*

Languages

Spanish: Native | **English:** Professional Bilingual (C1)
